

CeBIT 2006 trade fair innovation: CAD and SAP variant configuration ACATEC Software GmbH and itelligence AG present SAP variant configuration with automatic CAD data generation

Gehrden/Bielefeld, January 19, 2006 – itelligence AG and ACATEC Software GmbH, Gehrden, will display the latest version of their SAP variant configurator, which now incorporates automatic CAD model generation, to the general public for the first time at Hall 4, Stand D38 at the CeBIT trade fair to be held in Hanover from March 9 to 15, 2006.

The SAP variant configurator is now connected to the ACATEC POWER CONFIGURATOR. This means that the relevant CAD data and drawings and technical data sheets, product information, and illustrated product offerings can now be automatically generated and visualized even while the SAP system is being configured. In the current version the CAD systems SolidWorks®, Pro/ENGINEER® and Autodesk Inventor® can be remote controlled and routine processes can be automated in job-oriented design as standard.

As the leading international full IT service provider in the SAP environment, itelligence AG supports companies across the world in the fields of SAP consultancy, SAP industry solutions, development and system integration and Outsourcing and Services. In this solution the itelligence consultants' extensive SAP expertise help make it possible to integrate the SAP variant configurator including automatic CAD model generation into the SAP system rapidly and smoothly. The SAP variant configurator with automatic CAD model generation has already been implemented at the joint customers of ACATEC and itelligence and is now being presented to the general public for the first time at CeBIT in Hanover.

Press release – itelligence AG

CeBIT 2006 trade fair innovation: CAD and SAP variant configuration

ACATEC Software GmbH and itelligence AG present SAP variant configuration with automatic CAD data generation

About ACATEC

ACATEC Software GmbH specializes in the automation of sales and design processes of manufacturing companies in all industries. The core product is the POWER CONFIGURATOR. The standard product improves the efficiency of processes used in the acquisition of new customers and customer development, and accelerates the generation of design and production data that can be incorporated into process chains during new order acquisition and order processing.
